Genesis DUO Firmware Version 1.4 Release Notes

Release Category: **Minor**

Key Features

- **Control Method**
    - Support for Ambient ON/OFF Control Method.
- **RTD Inputs to Control Circuits**
    - Capability to assign any control RTD to either circuit as well as share RTDs between the circuits.
- **Controller Type Selection**
    - The display reflects the selection of single circuit/dual circuit or a single circuit with limiter.
- **Firmware Update Progress**
    - Progress bar at the top of the screen instead of %.

Resolved Issues

- Fixes issue of more than once device having the same network ID.
- Fixes issues which could cause updates to fail on headless variants.

Known Issues
- Before any Duo is added to an existing Genesis Network, it must be updated to v1.4.1 and the Genesis Network must be on v1.10 or later.
- Removing USB stick in the middle of update process can cause issues.
- When a circuit is disabled, currently the only indication is the power status changes to an icon. In future, a feature will be added to gray out the circuit gauge to indicate the disabled state.

Thermon highly recommends all our customers upgrade the DUOs in their network to the latest version for enhanced experience. Please work directly with our field services or product management team to facilitate the upgrade.
