

Announcing the release of Genesis Network Software Version 1.11.0

Release Category: **Minor**

New Features

- **Alarms Dashboard** - Inclusion of filter to identify circuits by Lock Out Tag Out (LOTO) and Forced On status; provision to interact with those circuits directly.
- **Health Monitor** – Functionality now includes alerts for low disk space and communication errors; functionality to download system logs.
- **RS-485 Interface** - Genesis Panels can now communicate on an RS-485 loop.
- **Performance** - Improved responsiveness with high numbers of circuits.

Resolved Issues

- Improved TLS support for the connection between the Gateway and Server.
- Minor fixes to resolve communication issues with 3rd party controllers as well as Thermon's TCM2 controller.
- Issue with updating the TC1818 controller with a TCM18 in the GN configuration.

In case of any issues, please report them at [Genesis Network™ | Thermon](#) using the 'REPORT ISSUE' link on the page.
